

Supplementary Figure 3

Supplementary Fig. 3. Silencing of HPRT mediated by Penetratin-2xDRBD fusion protein in the presence or absence of chloroquine. HeLa cells were treated with complexes at a concentration of 50 nM siRNA and 3 μ M protein, either with out without 50 μ M chloroquine co-treatment. HPRT levels were measured by RT-qPCR 24 hours after treatment and are presented as mean with SD.
